

#### PISCES: A P4-Enabled OVS

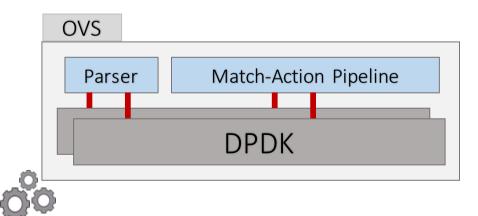

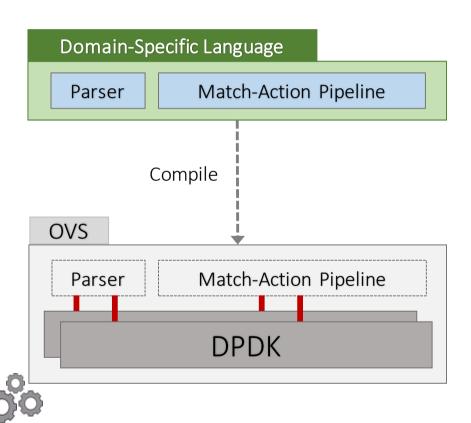

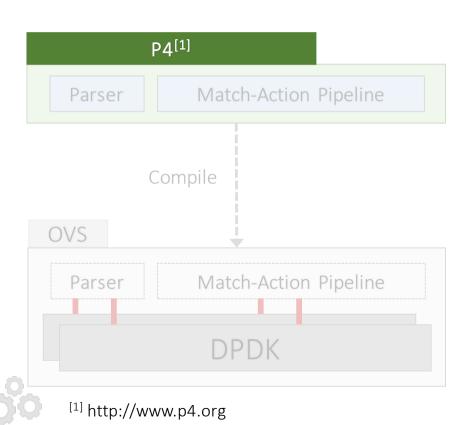

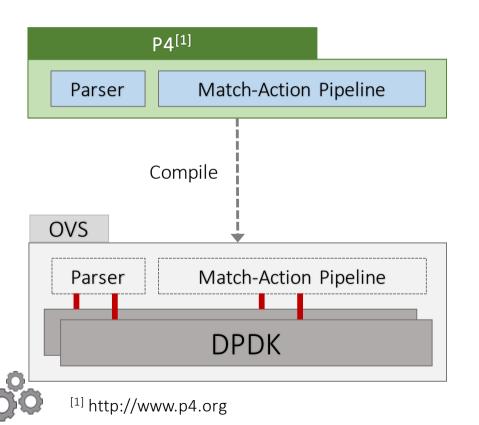

P4 is an **open-source language**.[1]

Describes different aspects of a packet processor:

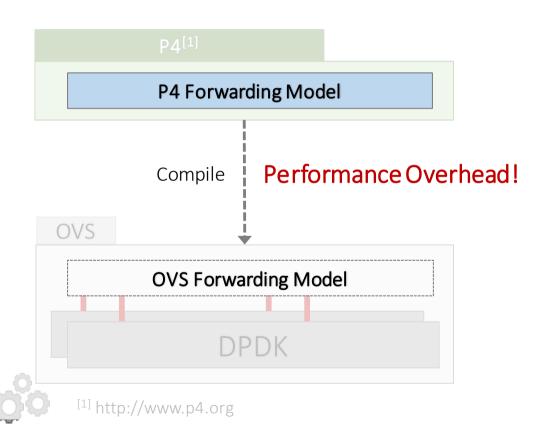

- Packet headers and fields
- Metadata
- Parser
- Actions
- Match-Action Tables (MATs)
- Control Flow

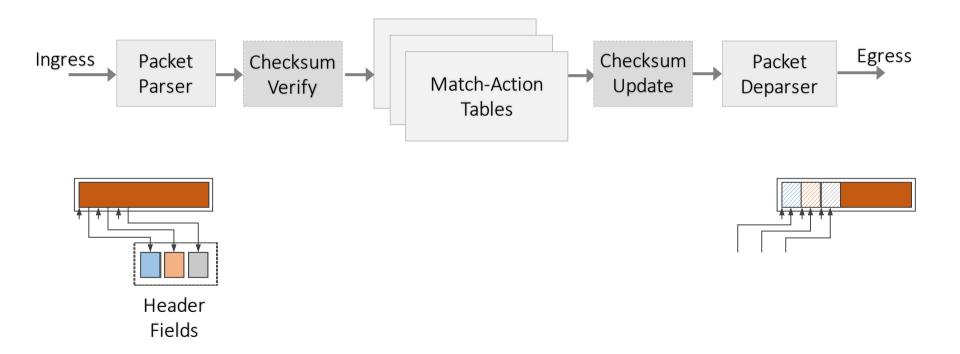

341 lines of code

Native OVS

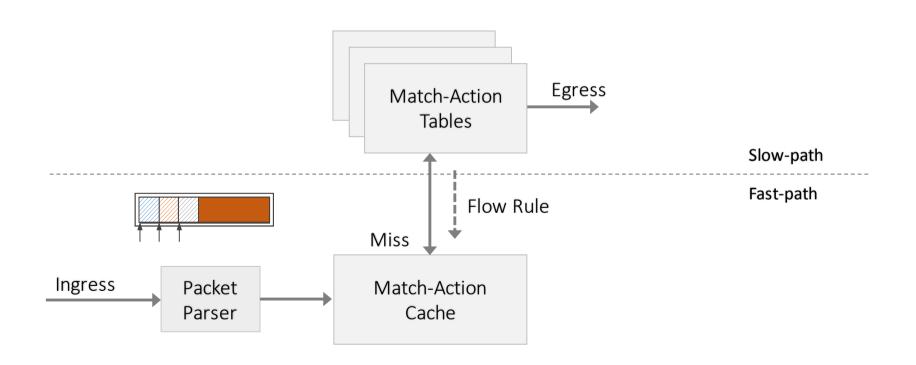

**14,535** lines of code

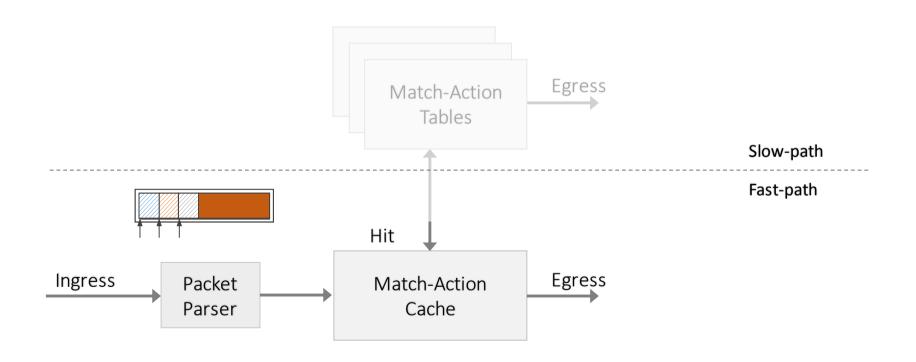

## P4 Forwarding Model (Post-Pipeline Editing)

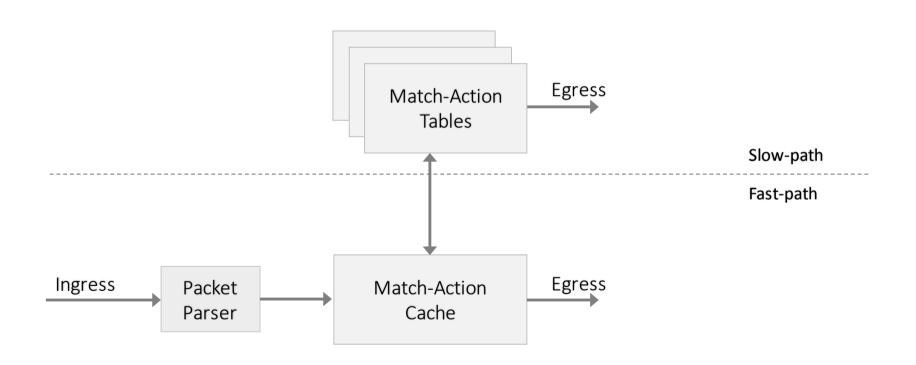

# **OVS Forwarding Model**

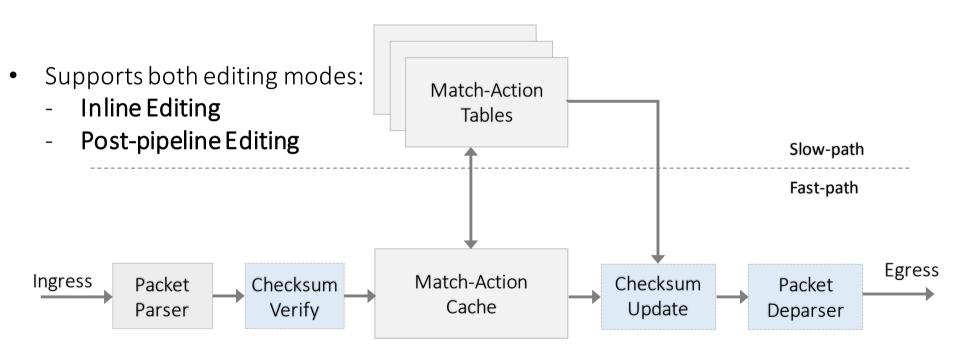

## **OVS Forwarding Model**

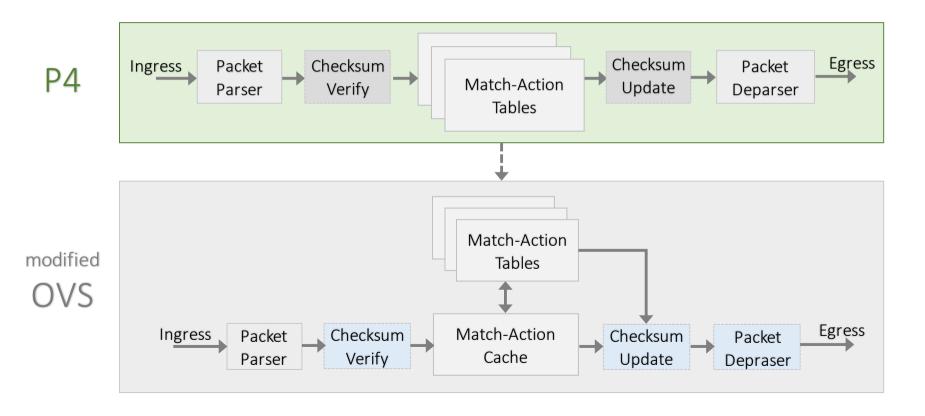

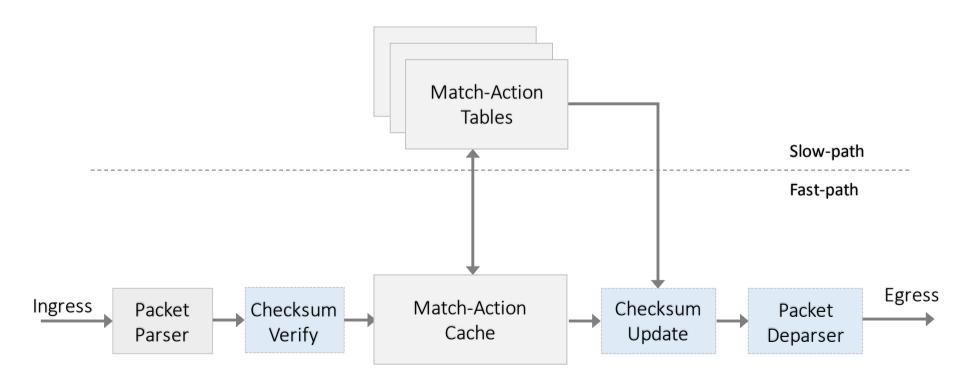

# OVS Forwarding Model (Inline Editing)

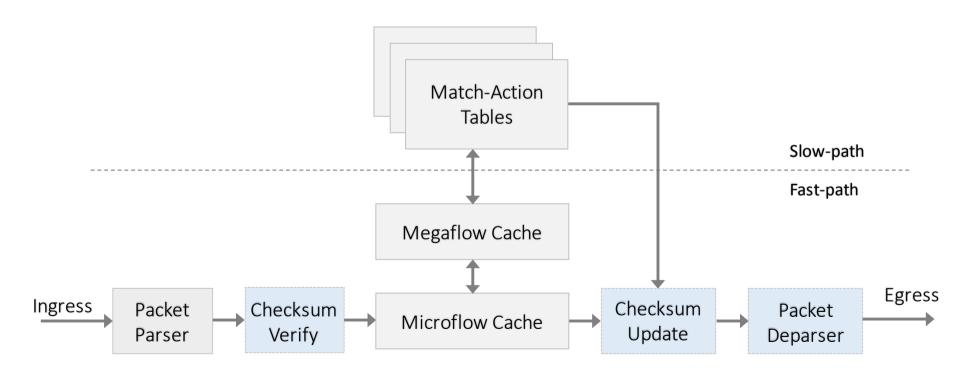

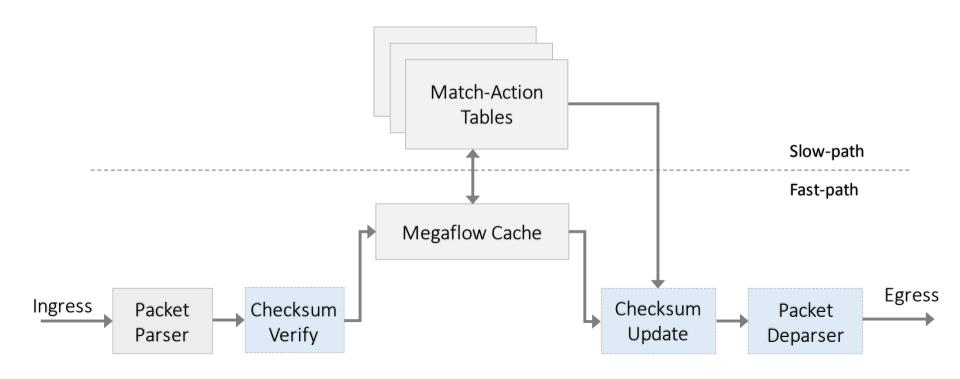

## PISCES: Compiling P4 to OVS

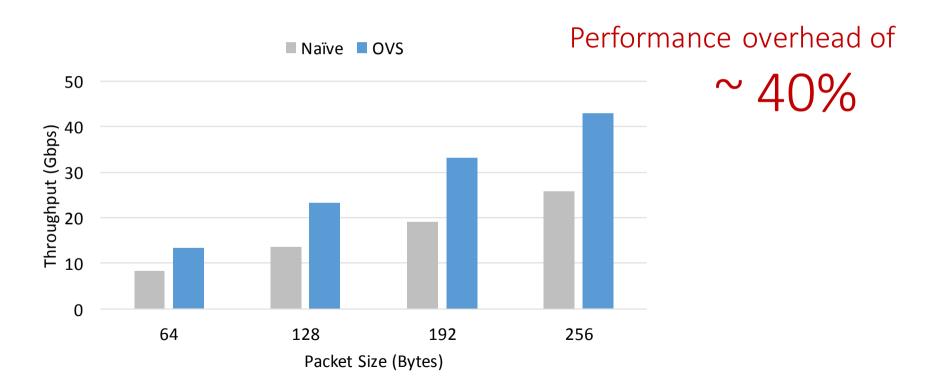

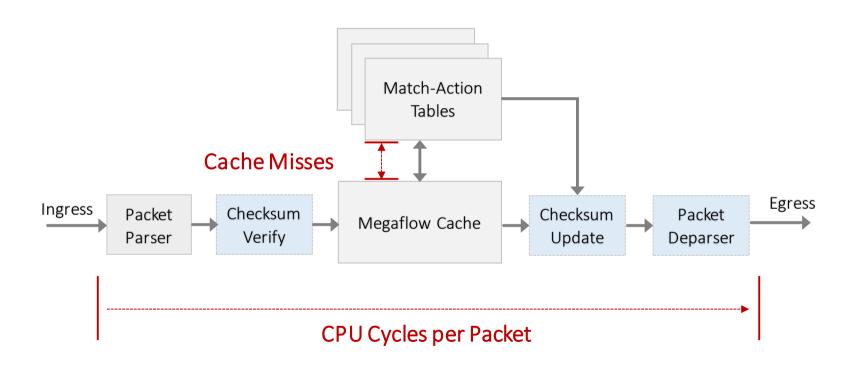

## Naïve Compilation from P4 to OVS (L2L3-ACL)

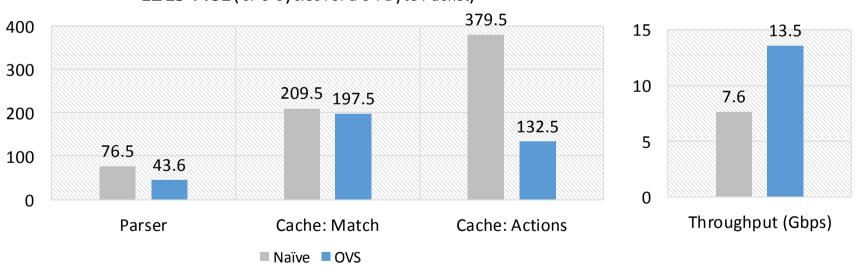

#### Causes of Performance Overhead

### Cause: CPU Cycles per Packet

# Factors affecting CPU Cycles per Packet

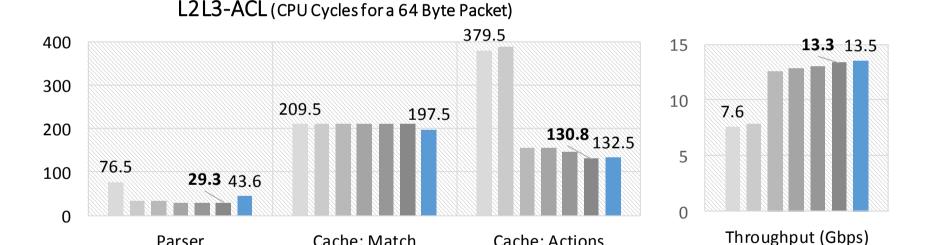

a. Extra copy of headers

b. Fully-specified Checksum

c. Parsing unused header fields

and more ...

#### Different Optimizations for L2L3-ACL

Cache: Actions

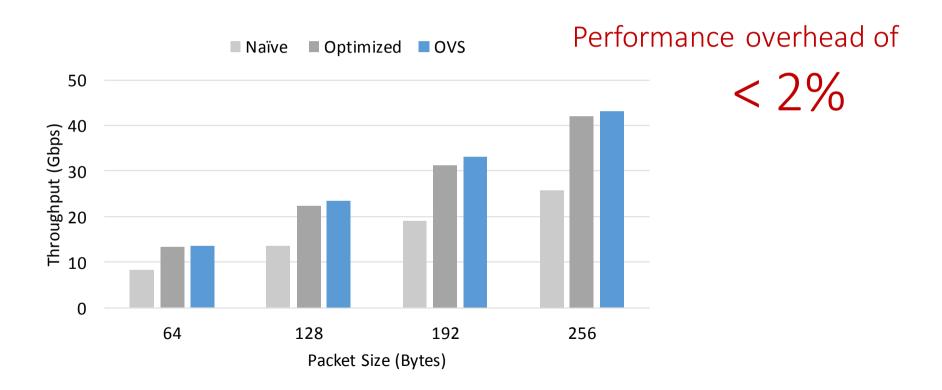

■ Act Coalcng ■ OVS

Cache: Match

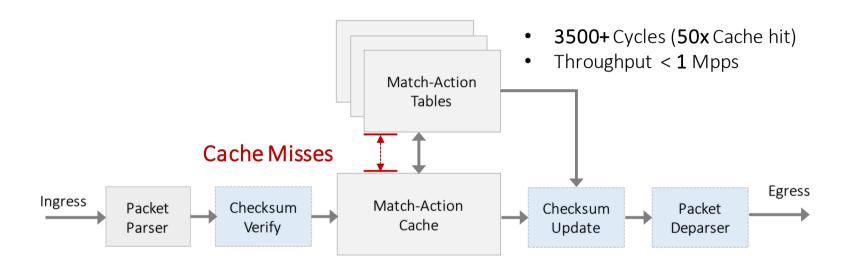

■ Inline ■ Inc. Chksm ■ Parsr Spcl ■ Act Spcl

Parser

#### Optimized Compilation from P4 to OVS (L2L3-ACL)

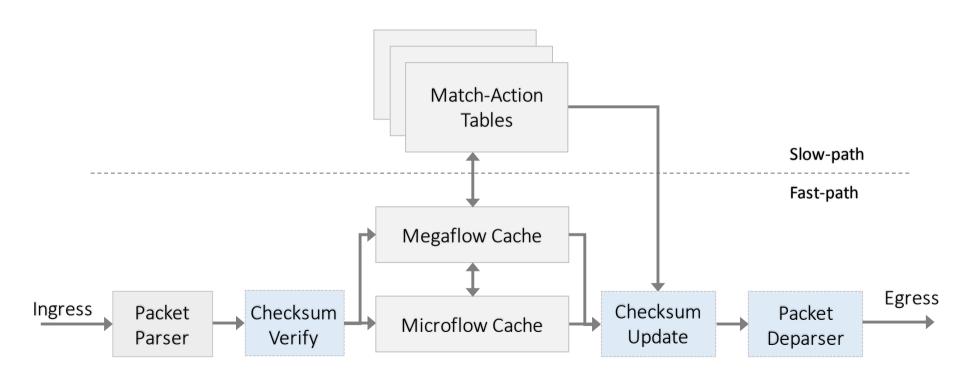

#### Cause: Cache Misses

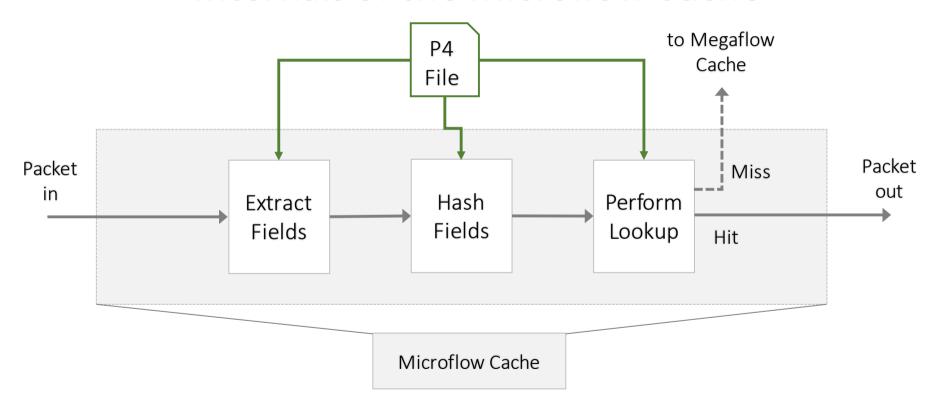

## Factors affecting Cache Misses

- a. Entropy of packet header fields
- b. Stateful operations in the match-action cache (or fast path).

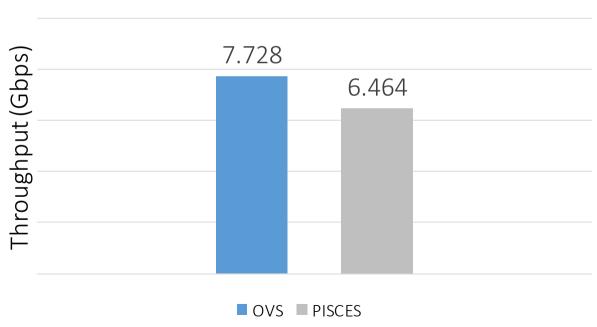

Microflow Cache

#### Internals of the Microflow Cache

#### Performance with the Microflow Cache

Phy-Phy, L3 Router Case, 64B

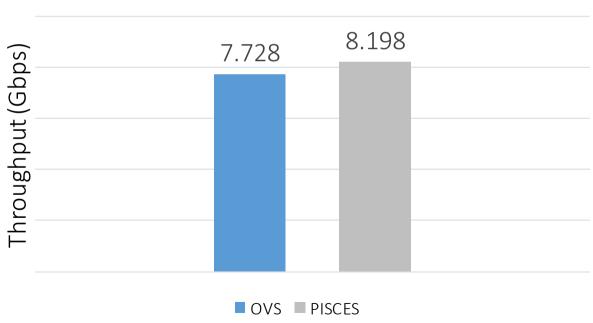

## Cause of Performance Degradation

Cacheline	64 Bytes			
0	Metadata			
1	Metadata		Ethernet Header	
2	IPv4 (1 <sup>st</sup> 16Bytes)	IPv4 + L4 Proto	Empty	

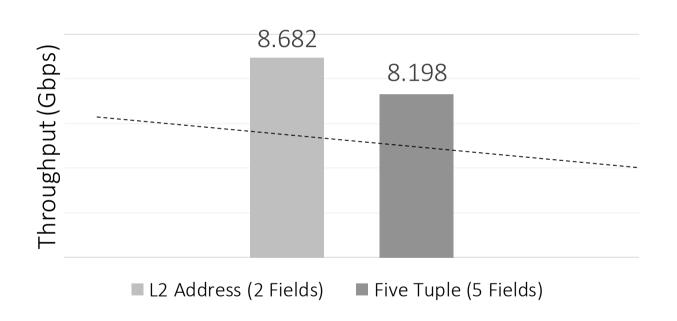

Simplified "flow" Structure

#### Performance with the Microflow Cache

### Varying the Number of Hash Fields
